

Ron Michaels called, morning, 6/15/11

Flexsteel has requested a summary judgment from the court in the case filed against them and others for the Lane Street contamination.

He mentioned that they were told (I think in an interrogatory) that 16 oz spray cans containing TCE were used as a degreaser to clean cutting tools. He said that when "empty" these were placed in the trash compactor. (I don't know if he was told this or he assumes this.)

At the Goshen facility there was a vapor degreaser machine. (I don't know if this was eventually moved to the Elkhart facility or not.

He is emailing one interrogatory. He is having mailed some other material. Of special interest are interrogatories 25 and 26.

In a listing of assets in a document that he is sending, the vapor degreaser is listed on page BK2673.
